

## Foresight Imaging Achieves ISO 13485 Certification

(Chelmsford, MA – April 13, 2009) Foresight Imaging is pleased to announce the achievement of ISO 13485 and ISO 9001 certifications. The certification covers all Foresight Imaging products including its TIMS DICOM System medical device and its high performance frame grabbers & video streamers.

“We are very pleased to achieve our ISO certifications. Since our inception 10 years ago, we have conformed to stringent quality standards in design, manufacturing, and customer service. This certification validates our consistent commitment to these quality processes and procedures,” said Mark Mariotti, President & CEO of Foresight Imaging.

### About the TIMS DICOM System

Hospitals and imaging clinics around the world need to convert their non-DICOM medical modalities to DICOM. Upgrading or replacing these modalities is too expensive, often costing hundreds of thousands or millions of dollars. Replacing all of the non-DICOM devices for PACS connectivity purposes is simply not cost-effective. The solution is the TIMS DICOM System. TIMS converts any non-DICOM medical modality to DICOM. The resulting digital study can be sent to PACS, recorded to CD/DVD/USB, and printed to film or paper. TIMS is available for a small fraction of the cost of a modality upgrade. Yes, TIMS can convert ANY medical modality to DICOM. This includes ultrasound, fluoroscopy, endoscopy, motion X-ray, angiography, nuclear medicine, MR, CT, and much more. TIMS captures both static images and streaming video at 30 frames per second, 15 frames per second, or at virtually any frame rate desired. TIMS even converts to DICOM the JPG, BMP, and AVI images generated in pathology, dermatology, and ophthalmology applications.

### About Foresight Imaging

Foresight Imaging is a world leader in the design of high accuracy, high performance video streamers, frame grabbers, and PACS connectivity hardware and software for the medical imaging market.
